QUIETER LEARNING SPACES

Improved Academic Performance

Optimized acoustics in educational spaces are critical for student learning. Typical educational facilities have many hard surfaces, such as terrazzo, concrete or wood floors, exposed ceiling decks, windows and drywall, which reflect sound rather than absorb it.

When reverberated sound builds up in a room, it becomes difficult to hear and understand instruction.

Quieter learning spaces improve students' academic performance and reduce stress on teachers. pinta acoustic offers a wide range of attractive, easy-to-install acoustic products.

Northwest ISD Aquatic Center:
WHISPERWAVE™ and SONEX® Valueline Panels and acouSTIC™ Foam Adhesive

Central Elementary School, Multi-Purpose/Cafeteria:
SONEX® One Panels and acouSTIC™ Foam Adhesive

APPLICATIONS

- Classrooms
